Manufactured Date From:  
1976/01

Manufactured Date To:  
2099/12

Date: 27 Jan 2005

DATE: April 1985  
TO: FLEXI-COIL DEALERS & CULTIVATOR OWNERS  
PRODUCT: FIELD CULTIVATORS, & CHISEL PLOWS  
SUBJECT: WHEEL MOUNTING FOR TIRE OPTIONS

In 1983 a heavy duty spindle and tire option was created to provide added support for cultivators while in transport position. These optional kits were designed to fit on all models of field cultivators as well as all chisel plow models built since 1976. These kits come with a 9.5 x 16.5LT 12 ply tire, an eight bolt rim and an eight bolt hub and spindle. They are used primarily on the center section of the cultivator although they can be found on wing sections as well. They are designed as a substitute for an existing 6 bolt hub and spindle, and are most easily identified because of this.

The rim supplied with this optional kit is a reversible rim with a 1 1/8" offset [see line drawing]. Because the rim is reversible it can be mounted incorrectly. The offset will cause the load to be shifted so that the load is carried by only one of the bearings. THE RIM IS MOUNTED CORRECTLY WHEN THE VALVE STEM IS POINTING TOWARD THE SPINDLE MOUNT SIDE. If the rim is mounted incorrectly the center bearing is overloaded causing it to wear out prematurely. For this reason caution should be exercised when mounting these rims.
